

Integrated automated cutting, sorting
and ply kitting solution
for composites and advanced materials.

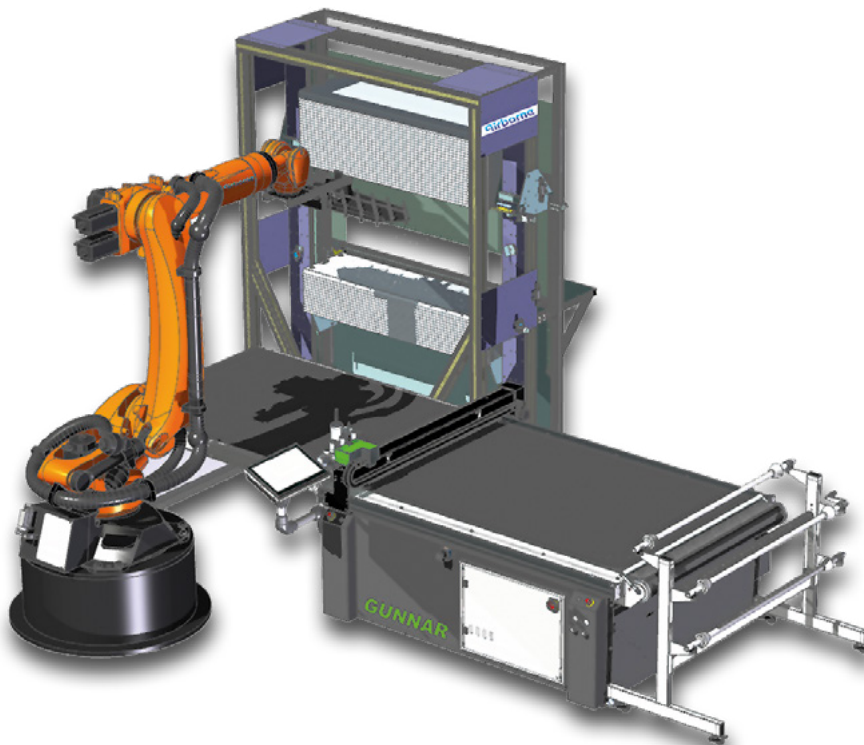

One system jointly developed by experts,
leading to maximized material utilization
and highest process secureness.

MAIN SYSTEM CHARACTERISTICS

GUNNAR and **AIRBORNE** provide a state-of-the-art turnkey solution to the customer, enabling and leading to maximized material utilization and highest process secureness.

- Turnkey combined hardware and software solution
- Fully automated, digitized and synchronized production cell
- Modular and scalable cell concept for highest process flexibility
- Optimized and maximized raw material usage based on automatic nesting
- Minimized footprint of overall installation based on vertical storage
- Full tracability of cut parts and ply stacks
- Works for thermoplastic and thermoset prepregs as well as dry fibres
